

Celanese Corporation's business figures and plans for the future

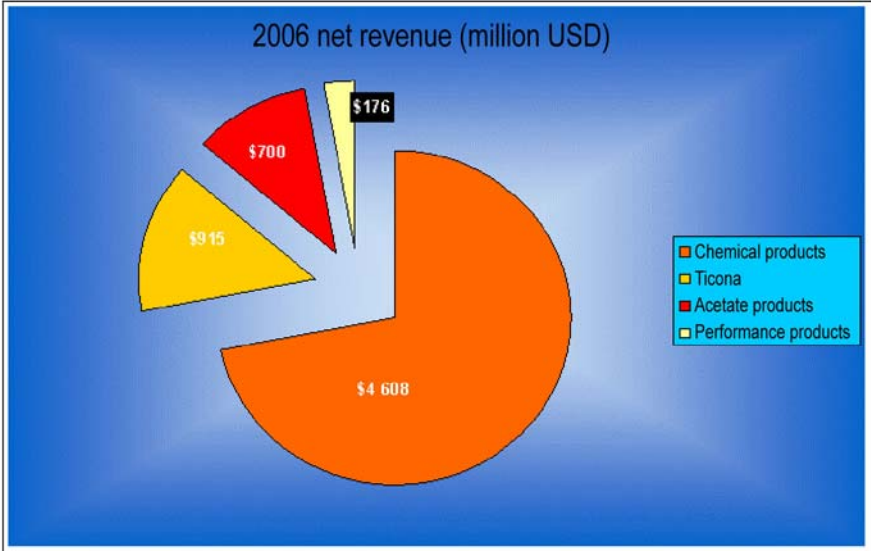

As a global leader in the chemical industry, Celanese Corporation produces chemical products, acetate products, engineered polymers and performance products, such as food ingredients. Its chemical products group makes base materials such as acetic acid, vinyl acetate monomer (VAM), and high-value chemicals such as polyvinyl alcohol (PVOH) and emulsions. Celanese’s products are key components in making everyday products, such as paints, adhesives, lubricants, pharmaceutical base materials, fabrics, building materials, automotive parts, filter materials, telecommunication devices and food and beverages .

Celanese has manufacturing facilities in North America, Europe and Asia and has sales organizations in many countries including Hungary.

Celanese has approximately 9,000 employees worldwide, its net revenue in Q1 2007 was USD 1.631 billion, which is 9% higher than the same period last year. Its revenue in 2006 was USD 6.7 billion, compared to the USD 6.1 billion in 2005.

Celanese Corporation is continuously looking for new growth opportunities and applications for its wide range of products. It strategically invests in countries where it can enhance its ability to reliably supply the global market. For example, in China, where there is high demand for acetic acid, Celanese has recently constructed a plant capable of producing 600,000 tons of acetic acid per year. Celanese has many patented manufacturing processes that provide a significant cost advantage over their competitors.
